TAILOR MADE DESIGN FOR YOUR COMPETITIVE ADVANTAGE

VERTICAL HANDLING : TAILOR MADE SOLUTION

STEPS:

- THE ANALYSIS OF THE PROBLEM
- THE STUDY OF THE APPLICATION
- THE SOLUTION AND THE PROJECT
- THE MANUFACTURING
- THE CERTIFICATION
- THE CONTROLS

1 /

THE ADVANTAGE FOR THE CUSTOMER

Often the operations of handling of the products, by lifting, involve **time** and **costs** that could be reduced by adopting an appropriate solution that does not always go through conventional devices.

The analysis of the **efficiency of handling** in the production flow is not always done as it should.

This may lead to a non-organic development of operational activities resulting in loss of productivity.

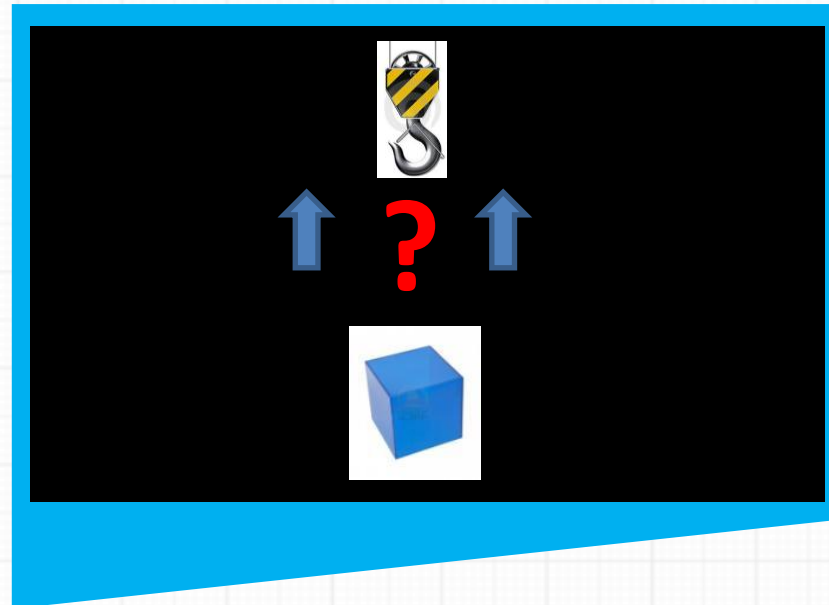

METECH proposes as a partner with the aim of adding value to its customers in the solution of lifting problems.

2/

THE SPECIFIC NATURE OF OUR INTERVENTION

METECH srl analyzes the specific problem of lifting starting from the lifting means at the disposal of its customers and, through the examination of the characteristics of the object to be lifted, it proposes the most suitable **integrated solution**.

3/ INTEGRATED SOLUTION

THE MEANS OF LIFTING

The lifting device that the customer owns is carefully examined in function of the capacity, type of hooking and relative movements available.

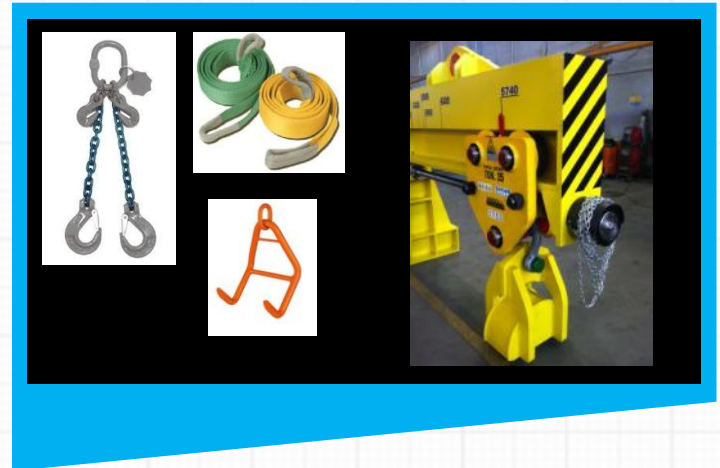

Consideration is given to **fixed** and **self propelled** means in the widest range such as:

- overhead crane (single and double girder).
- crane (flag, "bicycle" type)
- hoist (various)
- forklift

LIFTING SYSTEM

The lifting system adopted may include the use of the most common sets available, until the adoption of special systems in which the solution proposed includes the realization of **special coupling devices**, accessories and appendages tailor designed for the anchoring of the particular to lift with the interposition of balancing equipments.

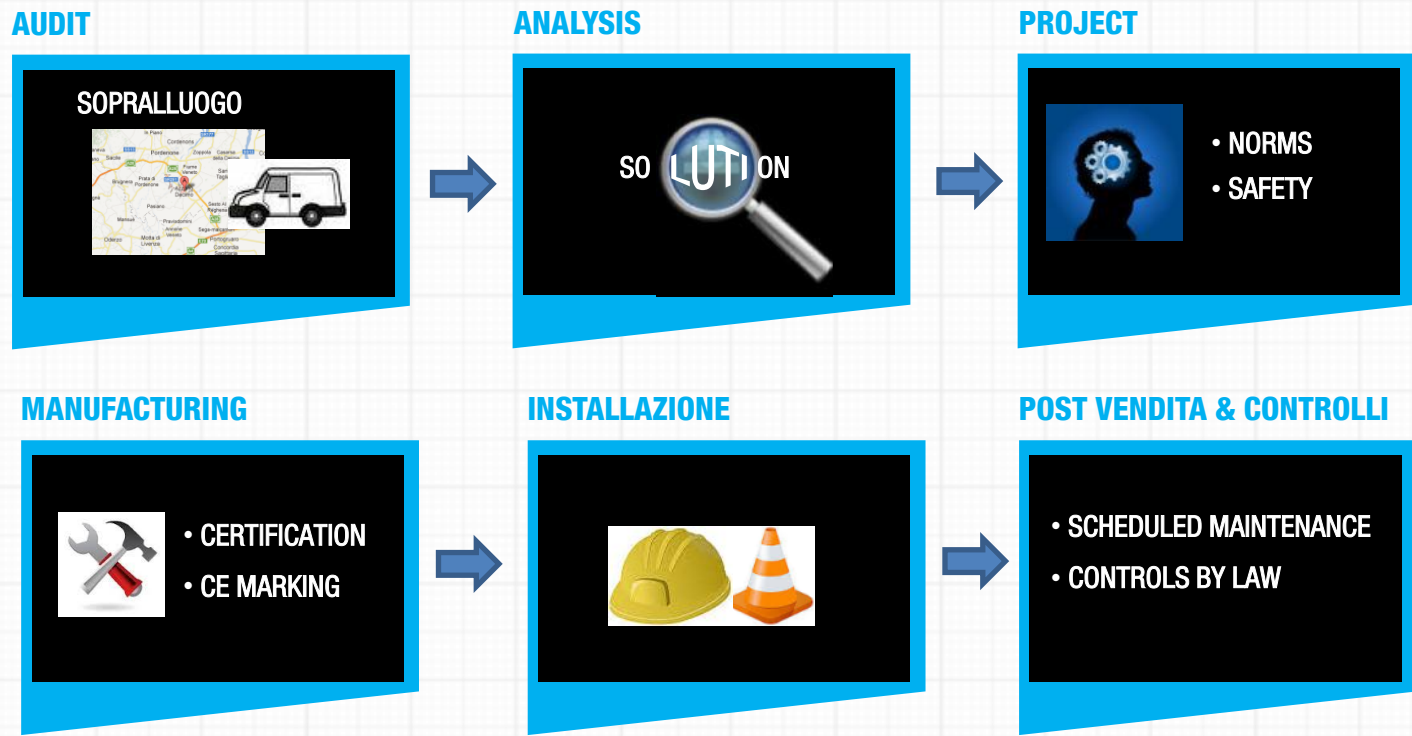

4/ THE METHOD

Particular importance is given to the initial **AUDIT** to verify the lifting issue, followed by a phase of **ANALYSIS**, detection of the solution, the implementation of the **PROJECT** taking into account the relevant legislation and norms, **MANUFACTURING** of the tailor made items with the affixing of the **MARKING** and the issuance of the **CERTIFICATION** involved.

METECH's service follows until the release with the **INSTALLATION** of the lifting system and continues with the **AFTER SALES** assistance for what concerns even the burdens of **CONTROL** required by law.
